# tango reflex™

## THE POWER OF TWO **SLT and YAG**

Move effortlessly between SLT and YAG modes, ensuring that you are able to treat patients across both modalities with maximum accuracy and optimal efficacy.

The Tango Reflex incorporates Ellex's proprietary SLT technology — providing superior energy control, a sharp-edged aiming beam and the industry's fastest firing rate of three shots per second.

## IMAGING EXCELLENCE

The Absolu offers a huge leap forward with many options including the new 20MHz annular probe for outstanding images of the eye.

It has a 15MHz probe for deeper penetration and the UBM probe for clear anterior detail. It also has A-Scan capability and Standardised A-Scan to assist with oncology diagnosis.

## RETINAL LASER THERAPY, REINVENTED

The Easyret 577nm Retinal laser is a fully integrated laser that not only allows the doctor to treat PRP, Macula and Retinopexy in the conventional manner by using either single spot or multispot modes, but also has the added advantage of Subliminal mode.

Subliminal mode enables the treatment of some appropriate patients with Sub-Threshold laser for CSC and DMO amongst other things.
